

DUAL-PROJECT

DUAL-Big®

Maximum reliability and resistance to solicitations.

The DUAL-Big® doors constitute the Made in Italy innovation. In the context of large speed doors, they guarantee low maintenance, manoeuvrability and waterproofing costs. The DUAL-Big® industrial doors are often used to close huge compartments, dedicated to the storage or parking ships and planes, that can have different types of uses: shipyards, airport bases, mineral processing, recycling, energy, waste, sandblasting, painting, heavy industry, maintenance and repairs. Much attention is paid to the technical aspects related to the speed of installation. Considering curtain dimensions, particular attention is related to the sizing of the automation, electrical system and safety devices in compliance with European regulation.

All electrical and electronic devices undergo a strict internal procedure of quality control.

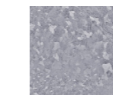

DUAL-Big®

Customizable curtain with a silk-screen painting or digital printing.

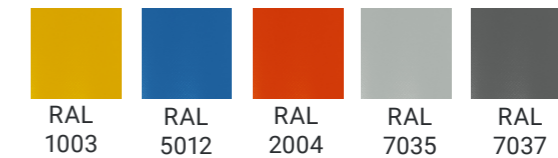

SPECIFICATION	STANDARD FEATURES
Operator	Inside the upper rail
Max clear passage	25000 X 22000 mm
Upper beam	Upper rails in carpentry
Rail	Structural profile with restraint system
Opening controls	Start / Stop push button on board, led flashing blinker
Curtain	Double leaf curtain polyester fabric, 900 gr/sqm
Windows	No
Safety	Integrated in the gearbox
Speed	0.3 m/s
Installation	Outside
Wind resistance	Class 4
Belts	For double curtain lifting

Frame: materials and colours

Galvanized steel
